

Surfactant-free binder

Wood impregnation

Binder designed for decking, cladding, etc.

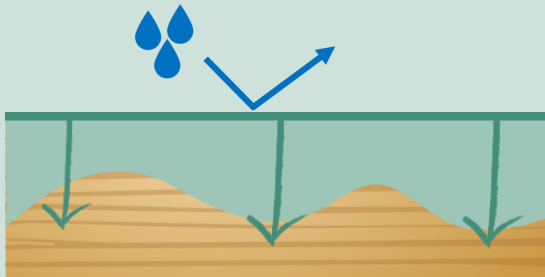

*Based on C content measured according to EN 16640

Deep wood penetration

for a high **protection** against weathering degradation

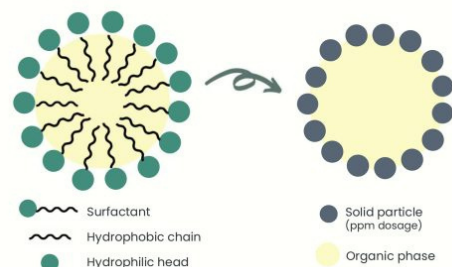

Nourishes wood while maintaining its natural appearance

Surfactant-free binder

to formulate highly **hydrophobic** wood impregnation products

The Pickering Technology
A clever alternative using **solid particles irreversibly absorbed at the water/oily phase interface to stabilize the dispersion.**

Bio-based binder

to increase the **biogenic carbon** rate of wood saturators
